

A wide-angle photograph of a center pivot irrigation system in a snowy field. The system consists of a long metal wheel line supported by multiple truss structures, with several large wheels visible in the foreground. The field is covered in snow, and the background features rolling hills and mountains under a clear blue sky. The text "NELSON IRRIGATION NEWSLETTER" is overlaid in white, uppercase letters across the middle of the image.

**PRODUCT SPOTLIGHT: R2000FX**

---

The [Nelson R2000FX](#) is a low pressure sprinkler that delivers greater radius of throw and the benefit of flow control nozzles to the low pressure market segment.

The R2000FX combines Nelson Irrigation's proven Rotator® Technology with off-axis plate motion to deliver low-pressure operation with unparalleled radius of throw of 33-40 ft (10-12 m).

With an operating pressure of 20-35 psi (1.5-2.5 bar) and a flow of 1-3 gpm (227-681 lph) the R2000FX is ideal for row crop, field crop, banana, oil palm, nut, and nursery applications. Flow control nozzles are standard ensuring even flow at every sprinkler for whole farm uniformity even on hilly ground. Wide throw allows wider distance between sprinklers so more ground is irrigated per zone control valve - saving money. Because flow control nozzles are plug resistant and no seals are exposed to water pressure expect heavy-duty reliability. The product is also proving reliable when using water with high bicarbonate or iron content.

To request more information or order please [contact your Nelson Irrigation Territory Manager](#).
