Nelson Retirement!

George Sesser, a Senior Project Engineer, retired this July 31, 2023. George started work at Nelson on May 15, 1976 after working for a hay baler manufacturer in the Central Valley of California.

During his entire career with the company George worked on developing new products and improving existing ones. He is named on over 90 patent documents associated with Nelson products and has been a major contributor to the company's success. His product innovations include the R20, R2000, R2000WF, R2000FX, MRDC, 3NV Nozzle System, O3000, O3030, O3030FX and the MP Rotator® to name a few.

The MP Rotator won the IA New Product contest in 2002 and the 3030 Series concept won the award in 2015. George received the Irrigation Association Industry Achievement award in 2011. We are forever indebted to George's creative mind and competitive spirit.

PRODUCT SPOTLIGHT: MS10 ROTATOR®

The [Nelson MS10 Rotator®](#) is an all new, revolutionary design that combines the benefits of Rotator and Spinner technology to maximize uniformity and radius of throw. It excels in outdoor nurseries with container grown plants. With more radius than an S10, R10TG, or any competitive option, it allows wider spacing which lowers system cost.

The MS10 can be mounted in either the upright or inverted position. It is available with either 1/2" MNPT or 1/2" Female Acme threaded connection. The 1/2" Female Acme thread is quick to remove for cleaning nozzles, and it is compatible with a variety of stake and tube assemblies. The acme thread also makes it easy to integrate with Nelson mini regulators.

The MS10 is also compatible with the road guard, so it can easily be used on field edges to prevent overwatering of adjacent beds, aisles, and roadways.
